Superbonus 110%, M5s Liguria and Genoa: “If made systemic it will guarantee liquidity to families and businesses”

**Genoa.** “For years we have been inviting political groups to put aside the“ ideological follies ”regarding Superbonus 110%. Finally, now, the Associations are also making themselves heard and therefore Ance did well to warn those who next autumn will have the honor and the burden of leading our country. It will remain to be seen whether intelligence will prevail over positions taken by mere side. As M5S, we will defend the measure that allowed Italy to reach 6.6% of GDP in 2021, a result much praised by Premier Draghi. Which, it should be remembered, has done everything to dismantle it despite the excellent performance of the standard. Which belongs to Giuseppe Conte and the 5 Star MoVement, like the PNRR ”.

The pentastellati of Liguria declare this unanimously, both those who have just applied for themselves, as well as those who sit in the regional and municipal councils of the region, as well as the many activists who in recent years have worked to defend the program.

“A measure – continue the Ligurian pentastellates, taking up a national note – which had the applause of EU commissioners Frans Timmermans and Kadri Simson, as well as the president of the Commission Ursula von der Leyen, so much so that its effectiveness was expressly recognized in the last country report of the EU Commission dedicated to Italy. Aware of the vital importance of this measure for our country, we have requested and obtained the inclusion in the resolution recently approved by the EU Senate Policy Commission, with reference to the proposal for a directive of the EU Parliament on the energy performance of buildings, to follow the “Superbonus model” to allow even the most vulnerable groups to access the measure and therefore to participate in the ecological transition process that the directive aims for ”.

“The numbers speak for themselves and we thank the president of Ance Liguria Emanuele Ferraloro for reminding them to those who continue to turn a deaf ear and for urging the government to secure the law, stabilizing it” with a long-term time horizon, recognizing it among the the function of decisive intervention on the real estate assets that produces the worst energy performance is another ”. There are 2,669 interventions admitted as deductions in Liguria for the Superbonus 110%, for a total of 488 million investments, of which 63.4%, equal to 309 million, admitted as deductions. The average investment amounted to € 462,000 in condominiums, and € 107,000 in single-family buildings ”.

“We hope that the words of the regional and national Reeds do not fall on deaf ears: having made the State earn an extra 30% is a fact confirmed also by the Enea Report”, conclude the spokesmen of the M5S.
